Bi-weekly Report 1

*1/19/2020-*

The team emailed Dr. Rover and asked to set up a meeting. A group chat was created on discord for future use.

*1/29/2020-*

The team and Dr. Rover have been in contact and decided to try to meet on Fridays at 11:30 on the 3rd floor of Durham, excluding the 7th and 28th of February.

*1/31/2020-*

Our first team meeting. We discussed our project's definition more in-depth. We clarified that the project is creating an environment that is simulating a warehouse and how to automate it to be as efficient as possible, such as using some kind of robot to move the goods. There should also be some UI for people to interact with and view. Discussed what each of us individually wanted to work on.

Goals for next meeting: Create a high-level sketch of what we want to put together, and what additional information would be needed for this project.
